

GFM Classifier Speed & Memory — Nano4 H200, 100K reads, batch 1024

Throughput

Peak GPU Memory

Key: MT 6-mer is fastest & leanest (3,030 r/s, 857 MiB) but low accuracy. The accurate MT 13-mer s1 (87.4%) runs at ~1,066 r/s — on par with NT-v2 (1,221 r/s) despite 100× fewer params; its cost is GPU memory (9,355 vs 6,731 MiB, large k-mer vocab).
